

Midwestern University Chicago College of Pharmacy offers a post-graduate year two (PGY2) infectious diseases (ID) residency program in conjunction with Northwestern Memorial Hospital (NMH) in Chicago. The purpose of this program is to use and build upon the competencies achieved in a post-graduate year one (PGY1) residency to promote the development of proficient, independent clinicians with an expertise in infectious diseases pharmacotherapy. Upon completion of the program, graduates will possess the knowledge and skills to function as independent practitioners and members of a multidisciplinary team to provide patient-centered care for patients with infectious diseases and to assess and improve anti-infective utilization through antimicrobial stewardship. The dual focus of the program on infectious diseases and teaching is designed to prepare graduates to become effective educators of pharmacotherapeutic topics in the practice area of infectious diseases in the clinical and/or academic setting.
